

— THE PROBLEM

Long lines. Lost context.

At busy career fairs, candidates wait to check in while recruiters try to remember dozens of short conversations.

01 Lines slow the first hello.

Manual check-in creates long waits at the booth.

02 Names blur together.

Interviewers may forget who they spoke with.

03 Details disappear.

There is no clear record of what was discussed or what comes next.

AT CHECK-IN

CHECK
IN

A slow start creates a longer wait.

AFTER THE CONVERSATION

Who was it?

What did we discuss?

What next?

THE SOLUTION

One record from check-in to follow-up.

TalentiQ connects candidate details, resumes, and recruiter context so a conversation does not end when the fair does.

LIVE CHECK-IN

Check in once. Save it right.

The candidate screen captures the essentials; the server stores a validated response and resume in Supabase.

JOIN THE FLEET.
Provide your details to securely check in. Our recruiters will review your information shortly.

RESUME UPLOAD

Required

SELECT FILE
PDF or DOCX, up to 8 MB. Drag & drop allowed.

SUBMIT >

From screen to Supabase

Candidate response

responses

Name, email, university, major, and UTC check-in time.

Resume file

resumes

PDF or DOCX, up to 8 MB, saved with candidate metadata.

Required fields

Server validation

Confirmation screen

— BUILT BACKEND

A clean path from submit to saved record.

The server action checks the submission before any candidate record is committed.

01

Validate details

Required fields, email shape, file type, signature, and 8 MB limit.

02

Stamp the visit

Capture the check-in instant in UTC for a consistent event record.

03

Store the resume

Upload to the Supabase resumes bucket with candidate metadata.

04

Write the response

Insert the candidate row, then show check-in confirmation.

FAILURE HANDLING

If the database insert fails, the uploaded resume is removed so records stay in sync.

RECRUITER WORKSPACE

Every conversation has a trail.

A dashboard concept that keeps candidate profiles, discussion details, and follow-up actions together.

Inventory

Conversation summary

Discussed a Python inventory forecasting project, interest in fleet analytics, and internship availability.

Conversation log

10:42 AM

Met at the booth

Introduced operations and analytics opportunities.

10:46 AM

Discussed project work

Candidate explained forecasting model and data tools.

10:49 AM

Follow-up marked

Recruiter saved profile for an analytics interview.

NEXT PHASE CONCEPT

Search by what was said.

With consent, recruiters can capture or dictate conversation notes. Transcription and topic filters make those discussions searchable later.

Voice note → Transcript → Topic filter → Candidate

VOICE FILTERING SYSTEM

VOICE QUERY

“Who discussed fleet analytics?”

Alex Morgan

Matched in conversation log: Python forecasting and interest in fleet analytics.

Recruiters review the transcript and the original candidate record before follow-up.
